Solution

Cold Head Change Kit

Comes with improved software safety interlock and easy to use user interface with high quality vacuum sensor and vacuum pump. Digital display allow user to follow up parameters easily. Kit includes all necessary cables, sensors, gas connections and accessories for the coldhead replacement on GE magnets.

All in one

All in one design allows user to control all parameters in single screen. Gas temperature , block temperature, RuO temperature and vacuum level displays are available.

Hi-Vacuum Pumping

One of the best vacuum pump in the market is included. Remarkable performance even vacuuming contaminated volumes.

Programmable

Programmable architecture lets us provide the software updates

User Interface

Easy to use 5" touch screen and graphical user interface. All in one screen.

Safety Interlocks

Safety interlocks avoid re-condenser over temperature during heat up or de-icing process.
